(54) UPDATE PROCESSING SYSTEM

(57)Abstract:

PURPOSE: To assure the matching properties of a data base without overlooking a necessary table despite a large updated variable by referring to a dictionary.

CONSTITUTION: Following are provided: an input means 1 to interactively input a parameter consisting of an updated item name and the values set before and after the updating together with a dictionary storage means 2 which stores the information necessary for control of a relational data base, a dictionary reference means 3 which inputs the information on a table including the updated item name through the means 2 based on the parameter inputted from the means 1, a relational data base storage means 4 which has a data base consisting of the table and the table defining information, a table selection means 5 which selects a table to be updated with reception of the information on the means 3 and inputs the table defining information through the means 4, a record retrieving means 6 which obtains a record to be updated based on the information received from both means 1 and 5, and a record updating means 7 which updates the record obtained by the means 6 into the updated value inputted from the means 1.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

BEST AVAILABLE COPY

[Number of appeal against examiner's decision
of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
